

RECFM Quick reference 0.7.0

```
<plugin>
  <groupId>io.github.epi155</groupId>
  <artifactId>recfm-maven-plugin</artifactId> <!-- the plugin -->
  <version>0.7.0</version>
  <executions>
    <execution>
      <goals>
        <goal>generate</goal>
      </goals>
      <configuration>
        <settings>
          <setting>foo.yaml</setting>
        </settings>
      </configuration>
    </execution>
  </executions>
  <dependencies>
    <dependency>
      <groupId>io.github.epi155</groupId>
      <artifactId>recfm-java-addon</artifactId> <!-- java generate dependency -->
      <version>0.7.0</version>
    </dependency>
  </dependencies>
</plugin>
```

Listing 1: pom.xml: plugin usage example

```
defaults:
  abc:
    normalize: Trim
packages:
- name: com.example.test
  classes:
    - name: Foo
      length: 55
      fields:
        - !Abc { name: firstName, at: 1, len: 15 }
        - !Abc { name: lastName, at: 16, len: 15 }
        - !Num { name: birthDate, at: 31, len: 8 }
        - !Abc { name: birthPlace, at: 39, len: 14 }
        - !Abc { name: birthCountry, at: 53, len: 3 }
```

Listing 2: configuration yaml example

```
<dependencies>
  <dependency>
    <groupId>io.github.epi155</groupId>
    <artifactId>recfm-java-lib</artifactId> <!-- java runtime dependency -->
    <version>0.7.0</version>
  </dependency>
</dependencies>
```

Listing 3: addon-java runtime dependencies

classes				
attribute	alt	type	O	default
